AU Small Finance Bank
API Banking - Migration Changes

1. To Make respective API service call, Copy the endpoint URL from contract note-

URL : *********

Header: Key-Authentication
Value-<<Bearer Token>>

Body: JSon request Body with encrypted payload as value
Format:
{
"encvalue":"<<response from aesencrypt>>"
}
Response: Copy the response - which will be in encrypted format

2. Introduction GCM (Galois Counter Mode) is a widely used encryption mode that provides both confidentiality and authenticity for data.

To perform GCM encryption and decryption, the keys are required: GCM-KEY and GCM-SALT (IV).

AU Bank will provide the above details at time of onboarding.

**Reference the logic which is shared separately.
